

AI is everywhere.
So is your data.

BoxNexus

Think Inside the Box.

Secure, Deployable AI for Organisations

contact@boxnexus.com

AI Is Already Inside Your Organisation

Right now:

- AI is being used informally
- Staff are experimenting with new apps, usage is accelerating
- Sensitive material is entering prompts
- Critical data is finding its way into external AI systems
- AI output is not reliable
- AI Answers can be hallucinated, outdated, or international
- Regulatory expectations are evolving
- Organisations are accountable under GDPR, SOC 2, and other
- Adoption is inevitable. It's time to think about how we

The Governance Gap

Organisations are reacting in three ways:

Common Responses

Meanwhile

- Ban cloud AI completely
- Teams continue experimenting
- Issue cautionary memos
- Productivity pressure increases
- Hope usage stays sensible
- Control remains unclear

AI capability is expanding. Oversight is lagging.

The Structural Weakness

Cloud AI systems:

- Trained on global data from unknown sources
- Knowledge boundaries are undefined and fluid
- Outputs can be hallucinated
- Cannot conform to your corporate mission

- For regulated or knowledge-sensitive organisations:
- There is no enforceable source of truth.

A Different Approach

Instead of banning AI or outsourcing your knowledge,
**Bring intelligence
back inside.**

**Contained. Defined. Enforceable.
Think Inside the Box.**

The Solution: BoxNexus

A deployable internal AI platform designed for organisational control.

- Local model runtime with your own datasets
- Org-wide synchronised document retrieval
- No external cloud dependency
- Works even in air-gapped environments
- Responses grounded in defined internal sources

- AI becomes internal infrastructure.

Knowledge Packs

Organisational Source of Truth

Knowledge Pack

A structured, versioned knowledge bundle for AI reasoning.

Each pack:

01 Defines the authoritative document corpus

02 Can be digitally signed

03 Can be version-controlled and audited

04 Can be distributed across teams

05 Enforces bounded knowledge for AI reasoning

- Instead of asking: "What does AI or the internet say?"
- You ask: "What does our authorised corpus say?"

Trust by Architecture

BoxNexus is engineered around three principles:

- Isolation
- Local usage and data storage
- Controlled Knowledge
- Signed, versioned Knowledge Packs
- Safe, Reliable Outputs
- Responses grounded in your defined documents

- Predictable AI inside defined boundaries.

Pilot Phase

BoxNexus is entering guided pilot deployment.

Design-partner organisations will:

1 Define knowledge boundaries

2 Deploy locally

3 Test governance controls

4 Shape Pack specification

5 Transition to licensed rollout

- Structured deployment. Not mass SaaS.

The Direction

- AI adoption will accelerate.
 - Governance expectations will rise.
 - Some organisations will rely entirely on cloud AI.
 - Others will require controlled internal AI infrastructure
 - BoxNexus is building that internal layer.
-
- Seeking: Pilot Partners
 - Organisations ready to define and deploy governed AI
 - Seeking: Early Capital
 - To harden and scale the platform
